

# 9in1™ Drinking Water Test Kit

**If you can't put a price on your life, it's time to test your water!**

'Even if you don't drink tap water, chances are you cook, bathe and brush your teeth with it...allowing toxins if they are present into your system.'

## 9in1™ Drinking Water Test Kit

- Do-it-yourself
- Results at home
- Very economical

## IT'S TIME TO TEST YOUR WATER

**Testing for contaminants in your drinking water with the 9in1™ Test Kit.**

It used to be complicated and expensive to test your water. Now the 9in1™ Test Kit is a quick, convenient, and affordable way to check the water you use for drinking, cooking, brushing your teeth, and everything else in your home.

One kit tests for bacteria, lead, pesticides, iron nitrates, nitrites, chlorine, pH, and hardness - water quality issues that are important for everyone to know.

Many types of potentially lethal bacteria, including E.coli, can be found in drinking water. Lead is a highly toxic substance that can leach into water from pipes and fixtures or from natural sources.

Millions of kilograms of pesticides and nitrates are released into the environment each year. If these pollutants are in your water, it may be a health hazard. And if there are children in the household, the risks become even more serious.

You cannot see, smell or taste most contaminants, but if they are in your water, the potential dangers to your health are great.

**Take this simple test. You owe it to yourself to find out if the water you drink is safe.**

Save \$100's of dollars - do it yourself

Now includes Bacteria & Iron test

World first The only 10min DIY kit on the market

Easy to use - results on the spot
